Seabrook International Completes Facility Expansion

Seabrook, New Hampshire USA – October 30, 2006 – Seabrook International has completed a 35,000 square foot expansion of its manufacturing plant on Woodworker’s Way in Seabrook, New Hampshire. The newly expanded 60,000 square foot facility increases production space, a move that allows Seabrook International the opportunity to grow with the expanding medical market.

The addition houses machining operations, a new inspection department, and additional floor space for our Assembly and “Customs and Specials” departments. The new layout is designed to provide smooth product flow throughout the manufacturing process. The company expects to complete the move into the new expansion by the end of December.

Seabrook International’s Chief Executive Officer Patrick Spearman said the company has done well in Seabrook. The town’s willingness to work with local business and its proximity to Interstate 95 allow its employees, suppliers, and customer’s easy access to the plant and its products.

Seabrook International is an industry-leading contract manufacturer of highly-engineered precision machined instruments, implants and other devices primarily for the orthopedic implant industry. Headquartered in Seabrook, NH and founded in 1973, Seabrook has built long-term partnerships with its customers based on trust, honesty, communication, and extraordinary customer service.
