

Press Release

Seabrook International hires a Director of Engineering.

Seabrook, New Hampshire USA – July 10, 2006 - Seabrook International is pleased to announce that John Ruggieri has joined Seabrook as Director of Engineering. This new position has been created to strengthen our engineering organization as we continue to build our business and work to improve our processes and capabilities.

Reporting to the President, John will be responsible for the direct management of the engineering group and resources. John will help to further develop the engineering functions, establish priorities, and direct resources toward implementation of the many improvement opportunities and initiatives we continue to identify. He will also play a key support role in the development of new business and further strengthening of existing customer relationships.

John comes to Seabrook with over nineteen years of mechanical design and engineering management experience. He has worked for both large and small companies, all of which included a strong manufacturing component of complex mechanical and machined components. John holds a Bachelor of Science degree in Mechanical Engineering from the University of Lowell and a Masters degree in Business Administration from Worcester Polytechnic Institute. John's hands-on approach combined with his strong mechanical background and experience make him an excellent fit for Seabrook International.
